Sertaconazole powder is commonly used to treat fungal infections of the skin, including:

- * Athlete's foot (tinea pedis)

- * Yeast infection of the skin (candidiasis)

To use sertaconazole powder, the affected area should be cleansed and dried thoroughly before applying the medication. The powder should be applied in a thin layer to cover the entire affected area. It is usually used twice daily, or as directed by a doctor.

In summary, sertaconazole powder is an antifungal medication used to treat various fungal infections of the skin. It is important to use it as directed and for the full treatment period to ensure that the infection is completely cleared.

To produce plugs, seed should be sown indoors at least 7 weeks before transplanting seedlings outdoors. Wild senna, as with many other legumes, has a hard seed coat. Scarify or chip the seed in order for water to be absorbed. Soak the seed in warm water for three hours before sowing.
